

Cognitive Process Profile

Profile the Thinking Processes of your Leaders

The CPP profiles peoples' thinking processes as they use their judgement to solve problems in complex and unfamiliar environments.

In partnership with

Cognitive Process Profile

Today many organisations are experiencing high levels of complexity and uncertainty, finding that many of their people are literally 'in over their heads'. The CPP identifies the level of complexity and uncertainty at which people can do their best work, the nature of their potential, and their ability to learn. It is a valuable tool for anyone involved in senior level selection, assessment or development.

Using computerised simulation exercises, participants are monitored on their ability to explore, link, structure, transform, remember, learn and clarify information.

The CPP profiles:

- > Capacity to handle complexity
- > General approach to problem solving
- > Effectiveness of thinking processes
- > Awareness of own thinking processes
- > Learning potential
- > Timing and pacing

Applications:

- > Matching people to roles according to levels of complexity
- > Identification of leadership potential
- > Talent management
- > Executive coaching
- > Succession planning
- > Leadership development
- > Career coaching
- > Senior level recruitment

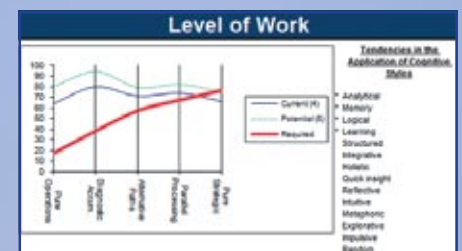

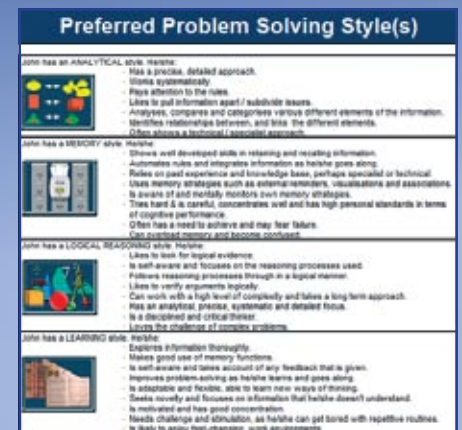

Over 170,000 people have taken the CPP worldwide

To find out more about the CPP or how to become qualified to use the tool please e-mail enquiries@creative-edge-consulting.com or call us on +44(0)1303 812007
